Aspiring Red Teamer — Web Application, Android & Active Directory Penetration Testing

EDUCATION

BS Cybersecurity, University of Central Punjab (UCP), Lahore; Fall 2024 – Spring 2028

- **Focus:** Red teaming and penetration testing — web applications, Android, and Active Directory environments
- **Certifications:** HackerOne Community Milestone Program, Level 1 (2026); Hack The Box Academy, 6 modules completed

SECURITY RESEARCH

Independent Bug Bounty Researcher, HackerOne; 2026 – Present

- Tested 8 public programs (Agoda, Whatnot, Playtika, Anduril Industries, Temu, Unico IDtech, CoinMate, Shopify) and submitted 20 vulnerability reports
- Identified reflected XSS across six parameters of Agoda's booking and payment flow, demonstrating session-cookie disclosure via unsanitized reflection
- Found Whatnot's GraphQL users query unauthenticated and unrate-limited, exposing 55.7M records; confirmed live by measuring growth between requests
- Mapped a dangling-CNAME subdomain takeover across 10 Playtika corporate subdomains, tracing the root cause to a missing GitHub Pages verification record
- Discovered unauthenticated access to Unico IDtech's Firebase Storage buckets, exposing 294 internal files including a private APK
- Demonstrated missing rate limiting on an Anduril Industries login endpoint with a 50-request brute-force proof of concept and zero lockout

ACADEMIC PROJECTS

- **Secure File Vault (C++):** built AES-256-CBC file encryption with an RSA-2048 wrapped key, SHA-256 integrity checks, and auto-shred after repeated failed attempts
- **Patient Triage System (C++):** implemented a Max-Heap from scratch over a raw dynamic array for real-time emergency prioritization with a FIFO overflow queue
- **Namaz Qaza Tracker (PHP/MySQL):** built a full-stack app with role-based dashboards, an enrollment approval workflow, and a live AJAX-updated counter

SKILLS

Languages & Tools: C++, Python, PHP, SQL, Bash, x86 Assembly, HTML
Security: Burp Suite, manual web application testing, broken access control, GraphQL security, business logic testing
